## Abstract

Talking beyond presence will be a panel discussion on vocabularies. Panelists will include the presenters in the firsts session of the symposium and invited guest panelists (TBD)

Questions for discussion: What controlled vocabularies are required for data types related to species occurrence and associated measurements? Are there existing and / or developing vocabularies for these data types? Are there data types for which vocabularies need to be developed? If so, who are the best authorities to develop and/or manage these vocabularies?

## Keywords

controlled vocabularies
